Summary

I am a Computer Science graduated from the Universitat de Barcelona and a student of a Master's Degree in Computer Science at the University of southern Denmark. I have worked as a full-stack web developer for almost 5 years in a small business in Barcelona, which gave me the opportunity to use my theoretical knowledge from the University to real world applications.

As a student I loved learning new and different things every semester, not only from artificial intelligence and machine learning, which are the areas I am now more focused on, but also from other areas such as algorithm optimization, distributed systems and data structures. I am not afraid to changes and challenges, I think they keep me in up-to-date and help me to sharp my skills.

Currently I am looking for an internship or job as a developer or data scientist while finishing my a Master's
